IN THE CLAIMS:

Please cancel Claims 1-15 without prejudice or disclaimer of the subject matter recited therein.

Please add new Claims 16-21 as follows.

Claims 1-15.   (Cancelled).

16.   (New) An information processing apparatus in which a printer driver is installed for transmitting a print job to be printed to a printer, comprising:

means for displaying a printer setting window activated by the printer driver;

print medium designating means for designating a print medium from the printer setting window;

mirror image print designating means for designating a mirror image print via the printer setting window on which it can be designated whether the mirror image print is performed or not when a transparent medium has been designated by said print medium designation means; and

print job command setting means for setting a paper type designation command corresponding to a designation by said print medium designation means or a mirror image print command corresponding to a designation by said mirror image designation means in a PDL command of a print job to be generated by the information processing apparatus,

wherein said print job command setting means (i) sets a transparent medium designation command in the PDL command of the print job when a transparent medium is designated by said print medium designation means and the mirror image print is not selected by said mirror image designation means, and (ii) sets the transparent medium designation command and the mirror image print designation command in the PDL command of the print job when a transparent medium is designated by said print medium designation means and the mirror image print is selected by said mirror image designation means, and

wherein said information processing apparatus transmits a print job containing the PDL command set by said job command setting means to the printer.

17.   (New) An apparatus according to claim 16, wherein the print job that contains the PDL command set by said print job command setting means makes the printer perform printing corresponding to the print medium type designation command or the mirror image print designation command of the PDL command.

18.   (New) An information processing method performed by an information processing apparatus in which a printer driver is installed for transmitting a print job to be printed to a printer, said method comprising:

a step of displaying a printer setting window activated by the printer driver;

a print medium designating step of designating a print medium from the printer setting window;

a mirror image print designating step of designating a mirror image print via the printer setting window on which it can be designated whether the mirror image print is performed or not when a transparent medium has been designated in said print medium designation step; and

a print job command setting step of setting a paper type designation command corresponding to a designation designated in said print medium designation step or a mirror image print command corresponding to a designation designated in said mirror image designation step in a PDL command of a print job to be generated by the information processing apparatus,

wherein said job command setting step (i) sets a transparent medium designation command in the PDL command of the print job when a transparent medium is designated in said print medium designation step and the mirror image print is not selected in said mirror image designation step, and (ii) sets the transparent medium designation command and the mirror image print designation command in the PDL command of the print job when a transparent medium is designated in said print medium designation step and the mirror image print is selected in said mirror image designation step, and

wherein said information processing apparatus transmits a print job containing the PDL command set by said job command setting means to the printer.

19.   (New) A method according to claim 18, wherein the print job that contains the PDL command set in said print job command setting step makes the printer perform printing corresponding to the print medium type designation command or the mirror image print designation command of the PDL command.

20.   (New) A computer readable storage medium on which a computer program for causing a computer to perform a method is embodied, said method is performed by an information processing apparatus in which a printer driver is installed for transmitting a print job to be printed to a printer, said method comprising:

a step of displaying a printer setting window activated by the printer driver;

a print medium designating step of designating a print medium from the printer setting window;

a mirror image print designating step of designating a mirror image print via the printer setting window on which it can be designated whether the mirror image print is performed or not when a transparent medium has been designated in said print medium designation step; and

a print job command setting step of setting a paper type designation command corresponding to a designation designated in said print medium designation step or a mirror image print command corresponding to a designation designated in said mirror image

designation step in a PDL command of a print job to be generated by the information processing apparatus,

wherein said job command setting step (i) sets a transparent medium designation command in the PDL command of the print job when a transparent medium is designated in said print medium designation step and the mirror image print is not selected in said mirror image designation step, and (ii) sets the transparent medium designation command and the mirror image print designation command in the PDL command of the print job when a transparent medium is designated in said print medium designation step and the mirror image print is selected in said mirror image designation step, and

wherein said information processing apparatus transmits a print job containing the PDL command set by said job command setting means to the printer.

21. (New) A medium according to claim 20, wherein the print job that contains the PDL command set in said print job command setting step makes the printer perform printing corresponding to the print medium type designation command or the mirror image print designation command of the PDL command.
